This year was a little different for the West Nile Program due to many events in 2020; however, it was a successful year considering the circumstances. Due to personnel restriction at the county and state level we were not able to set as many adult collections this year as the average.

Due to a less than average rainfall this summer, our average number of mosquitoes per data trap was lower in 2020 than most other years. We collected three West Nile Positive mosquito samples this year. On an average year we collect about 90 positive samples. There were no human cases reported in Cumberland County in 2020. We want to thank DEP, county officials, and municipal officials for their help on making this a successful season.
